Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int main()
3  {
4      int n;
5      scanf("%d",&n);
6      int count=0;
7      if(n==1)
8      {
9          //printf("*") is not counted
10     }
11     else
12     {
13         count++;
14         for(int i=1;i<=n;i++)
15         {
16             count++;
17             count++;
18             for(int j=1;j<=n;j++)
19             {
20                 count++;
21                 //printf("*") is not counted
22                 count++;
23                 break;
24             }
25             count++;
26         }
27         count++;
28     }
29     printf("%d",count);
30     return 0;
31 }
```
