Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1  #include<stdio.h>
2  int main()
3  {
4      int n;
5      scanf("%d",&n);
6      int rev = 0, remainder;
7      int count=0;
8      count++;
9      while (n != 0)
10     {
11         count++;
12         remainder = n % 10;
13         count++;
14         rev = rev * 10 + remainder;
15         count++;
16         n/= 10;
17         count++;
18     }
19     count++;
20     count++;
21     printf("%d",count);
22     //print(rev);
23 }
24 }
```

	Input	Expected	Got	
✓	12	11	11	✓
✓	1234	19	19	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
